Concepts I don't understand:

- Web server- What is a web server? Hardware and software side -for hardware it is a computer that keeps web server software. For software it has a couple of parts that control the way the web users get hosted files.

- Apache- "The Apache HTTP server is the most widely-used web server in the world."

- Firewall- "A firewall is a network security device that monitors incoming and outgoing network traffic"

Questions

- What is a web server? Hardware and software side -for hardware it is a computer that keeps web server software. For software it has a couple of parts that control the way the web users get hosted files.

- What are some different web server applications? "Apache,Nginx,Caddy,Lighthttpd,MonkeyServerOpen,LiteSpeed,Cherokee"

- What is virtualization? "Virtualization abstracts dedicated, physical resources, which can be allocated to specific tasks."

- What is virtualbox? "VirtualBox is a powerful x86 and AMD64/Intel64 virtualization product for enterprise as well as home use."

- What is a virtual machine? "A virtual machine (VM) is a virtual environment that works like a computer within a computer."

- What is Ubuntu Server? "Ubuntu Server is a part of the larger set of Ubuntu products and operating system developed by Canonical Ltd."

- What is a firewall? "A firewall is a network security device that monitors incoming and outgoing network traffic"

- What is SSH? "SSH, also known as Secure Shell or Secure Socket Shell, is a network protocol that gives users, particularly system administrators, a secure way to access a computer over an unsecured network."
